## **DETAILED ACTION**

### **Examiners's Amendment**

An examiner's amendment on the record appears below. Should changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Jay M. Finkelstein on March 27<sup>th</sup>, 2008. The application has been amended as Follows:

### **IN THE CLAIMS**

1. (Currently Amended) An airbreathing fuel cell comprising end plates, a unit cell having a central core, said unit cell being disposed between the two end plates, a fuel distribution manifold disposed centrally of the unit cell to

Art Unit: 1795

supply a fuel thereto, a single tie bolt extending centrally of the fuel distribution manifold and of the unit cell to unite these elements, fixing nuts screwed onto both ends of the tie bolt to integrally clamp the unit cell between the end plates with O-rings or the like therebetween, and

a cell stack formed by stacking a plurality of those unit cells, which comprise a solid polymer electrolyte membrane, an oxygen electrode and a fuel electrode, which are provided on both sides of the solid polymer electrolyte membrane to be opposed to each other,

a porous oxygen passage plate provided adjacent and toward the oxygen electrode of each unit cell,

separator plates provided adjacent and outside the oxygen passage plate and the fuel electrode,

wherein the oxygen passage plate comprises a plurality of opened grooves on a surface thereof opposed to the oxygen electrode, each of the grooves having two ends that are opened to an outer periphery of the porous oxygen passage plate and not extending to and therefore being closed to the central bore, such that the grooves of the oxygen passage plate faces away from the oxygen electrode.

Art Unit: 1795

wherein said fuel cell further comprises blowers for  
blasting air into the grooves formed on the oxygen passage  
the grooves,

wherein the blowers are arranged in opposition to  
the both opened ends of the grooves on the oxygen passage  
plates of the cell stack to blast air into the grooves, whereby air can be supplied  
centrally of the oxygen passage plates from both ends of the grooves, and further

wherein air supplied by the blowers passes through the porous oxygen plate from  
the grooves to the oxygen electrode of each unit cell.

16. (New) An airbreathing fuel cell comprising end  
plates, a unit cell having a central core, said unit cell being  
disposed between the two end plates, a fuel distribution  
manifold disposed centrally of the unit cell to supply a fuel  
thereto, a single tie bolt extending centrally of the fuel  
distribution manifold and of the unit cell to unite these  
elements, fixing nuts screwed onto both ends of the tie bolt  
to integrally clamp the unit cell between the end plates with  
O-rings or the like therebetween, and

Art Unit: 1795

a cell stack formed by stacking a plurality of those unit cells which comprise a solid polymer electrolyte membrane, an oxygen electrode and a fuel electrode, which are provided on both sides of the solid polymer electrolyte membrane to be opposed to each other,

a porous oxygen passage plate provided adjacent and toward the oxygen electrode,

separator plates provided adjacent and outside the oxygen passage plate and the fuel electrode,

wherein the oxygen passage plate comprises a plurality of opened grooves on a surface thereof opposed to the oxygen electrode, each of the grooves having two ends that are opened to an outer periphery of the porous oxygen passage plate and not extending to and therefore being closed to the central bore, such that the grooves of the oxygen passage plate faces away from the oxygen electrode.

wherein said fuel cell further comprises blowers for blasting an air into the grooves formed on the oxygen passage plates, the blowers being provided on the fuel cell to face the grooves, the blowers being arranged in opposition to the

Art Unit: 1795

both opened ends of the grooves on the oxygen passage plates of the cell stack to blast air into the grooves, whereby air can be supplied centrally of the oxygen passage plates from both ends of the grooves,

wherein the blowers for the cell stack are provided at least one by one on sides of the both opened ends of the grooves of the oxygen passage plates and on respective sides in parallel to the grooves, and the blowers provided on the opposed sides are provided in opposition to each other respectively to blast an air to the oxygen passage plates,

wherein an outer peripheral surface of the cell stack is rectangular in shape, and

wherein said blowers are operative to forcibly feed air into said grooves in order to provide compressed air in said grooves.

Claims 6-11 are cancelled.

#### **REASONS FOR ALLOWANCE**

Claims 1, 4, 5 and 12-17 are allowed.

The prior art does not teach or suggest a fuel cell including all of the claimed features. The most pertinent art includes Kenyon et al. (U.S. Patent No. 6,423,437 B1) and Kitagawa et al. (U.S. Pub. No. 6,773,843 B2).

Both the Kenyon et al. and Kitagawa et al. do not teach or suggest an airbreathing fuel cell wherein the oxygen passage plate comprises a plurality of opened grooves on a surface thereof opposed to the oxygen electrode, each of the grooves having two ends that are opened to an outer periphery of the porous oxygen passage plate and not extending to and therefore being closed to the central bore, such that the grooves of the oxygen passage plate faces away from the oxygen electrode as claimed by Applicants in claims 1 and 16.

For these reasons, the claims are allowed over the prior art. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "comments on Statement of Reasons for Allowance."
